SHOCK ABSORBERS

Brand / Type / Model						
Number of shock absorbers						
Shock absorber serial numbers						
Reason for overhaul / current issue	Oil leakage Reduced performance (soft / stiff) Abnormal noises Preventive maintenance Other:					
Standard overhaul procedure						
- Complete disassembly, cleaning, and inspection of all internal components - Replacement of oil, seals, and O-rings - Refill with correct nitrogen pressure - Adjustment and final testing on the shock absorber dyno						
Additional work						
Upon receipt, your shock absorbers will be completely disassembled and inspected to determine which components require replacement or repair. If the dampers are very dirty, additional cleaning costs may apply. You will receive a quotation as soon as possible, and the overhaul, including any additional work, will only be carried out after your approval. See the reverse side for an overview of indicative overhaul prices.						

Approval	Return
After inspection you will always receive a quotation. If desired, you may authorize a maximum amount in advance so we can proceed immediately without separate approval:	Return by courier
Proceed directly up to max. amount € _____	Pick up in Oss, NL
